## **DETAILED ACTION**

### ***Response to Arguments***

1. Applicant's arguments, filed 10/22/2007, with respect to claims 1-6 have been fully considered and are persuasive. The rejection of claims 1-6 has been withdrawn.
2. Applicant's arguments with respect to claims 7-10 have been considered but are moot in view of the new ground of rejection.

### ***Claim Objections***

1. Claim 7 is objected to because of the recitation of "the fist image signal" which should be corrected to read as -- the **first** image signal -. Appropriate correction is required.

### ***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 7-10 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claims contain subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. Claims 7-10 are directly or indirectly dependent from claim 1. However,

claim 1 is not a generic claim to claims 7-10. Instead, claim 1 belongs to a first embodiment (Fig. 1) with a complete different implementation for shading correction that uses shading characteristics from a high-sensitivity storage (28) and shading characteristics from a low-sensitivity storage (30) for correcting shading of high-sensitivity photosensitive cell and of low-sensitivity photosensitive cell independently (see specification, paragraphs [0011]-[0034]). On the other hand, claims 7-10 clearly belong to another embodiment (Fig. 8) that do not correct shading of the pixels in the way that the first embodiment does. Claims 7-10 direct to common shading data for both high-sensitivity and low-sensitivity photosensitive cells and do not include any separate shading characteristic for each of high-sensitivity and low-sensitivity photosensitive cells, but instead, correcting shading using a single common data (see specification, paragraphs [0035]-[0048]). The entire specification does not teach or disclose a combination of the above different features of the first and second embodiment in a single embodiment.

Thus, claims 7-10 cannot be enabled with claim 1 in view of the specification because they belong to different embodiments with different operation modes. Therefore, dependent claims 7-10 (in combination with independent claim 1) fail to comply the enablement requirement.

***Allowable Subject Matter***

4. Claims 1-6 and 11 are allowed.

Please refer to the Applicant's arguments of record for the reason for allowance.
